## Benedikt Gröndal Handwriting An Icelandic manual, 1883 Models

OPERINA

**B**<sup>ENEDIKT GRÖNDAL Sveinbjarnarson (1826–1907) was an Icelandic poet, a naturalist and literary historian. After a master's degree in Scandinavian Studies from the University of Copenhagen in 1863, he taught, wrote, and published a periodical, *Gefn*. His humorous *Heljarslóðarorrusta* (1861) made his countrymen laugh until their sides ached.</sup>

He was also a gifted painter, draftsman and calligrapher.

## Introduction

**T**<sup>T</sup> WAS a good year for common sense. In 1875, Denmark changed handwriting models, replacing blackletter cursive by copperplate. This extended to its Icelandic dominion, where copybooks and model sheets in the new style were in short supply. Eight years later, a much needed handwriting manual by Benedikt Gröndal was published.

The old style and the new are similar in appearance but have different letterforms.

## Before and after

The upper of these samples is blackletter cursive. The lower is copperplate. Both were written with a pointed pen. The two styles look alike at first glance, although most of the letterforms are different.

From Almanak Hins íslenzka þjóðvinafélags, Copenhagen 1877.

a a b d d d e i f f mno ghijkk opprrfstuúvxyzpzao"/cg/

**Before 1875** The blackletter cursive letters K e x don't look familiar to the average reader.

After 1875 In comparison, the same letters, written in copperplate, are easily recognized.

## A new beginning

**T**<sup>N</sup> THE EARLY fifteenth century, Florentine scholars started writing a new style that we now call italic. The lower case letters included elements of Carolingian minuscule. The capitals were inspired by classical Roman inscriptions, even including serifs that are hard to write with a broad-edge pen.

For a while it was the handwriting of scholars who corresponded in Latin, of royalty and diplomats, and the regular style of the papal chancery. In humbler parts of society, merchants and lawyers still wrote a blackletter cursive, the *mercantesa*.

Italic developed faster than many other styles. In less than a century and a half, it germinated, flowered, and went to  $\blacktriangleright$ 

ABCDEFGHIKLM tmamkinoparsitu WXYZ NOPQRST

### Late chancery cursive

Even Hugo da Carpi's excellent woodcuts cannot reproduce Ludovico Arrighi's graceful hand. At this stage, italic had lost its early vigor and entered a mannerist stage of restricted joins and bulb terminals.

From La Operina, Rome 1522.

## Transition

Giovan Francesco Cresci was probably the most famous writing master of his time. He led a movement away from the late, mannerist stages of chancery italic to early copperplate, a new style that swept the world.

From *II perfetto scrittore*, Rome 1570.

lmnopqrsstur: ABCDA M

seed. One reason may be that it wasn't used by a great number of people. It was fashionable rather than popular.
 A<sup>S</sup> TIME passed, it gained decorative loops and flourishes. It slanted more. The letterforms became more curved. New joins were added. But instead of fading into obscurity and disuse, it blossomed as a new style, the copperplate.

abbcddefoghhiijkklllmnnoppqrsfstuvnxyz RLe ABU UM, 09

## Flexible

Joseph Champion's model has alternative letters. It also offers both looped and straight ascenders. From *The Universal Penman*, London 1733–41. Copperplate was the handwriting of the British empire, its administration, commerce and industry. Well-trained clerks produced legible documents, neat in appearance, and fast.

A. リモノ hqrstuvwxyzı ' " X O

## **Unusual variants**

Benedikt Gröndal's handsome copperplate model has a few singular lettershapes. The letter f has a crossbar, slightly higher than on the letter t. The letter s is uncommonly tall. The letter ð is a disgrace.

**Eccentric** This letter f is not easily recognized except in context.

**Normal** This lettershape is unmistakable: a conventional descender and a loop before the exit stroke.

## Out of the past

Since the middle of the seventeenth century, the descender of the copperplate letter f has turned to the right at the bottom. Benedikt Gröndal's descender turns to the left.

## Đð

## **Endangered character**

The letter ð (eth) is used in Icelandic, Faeroese and old English, where it and the letter thorn (Þþ) were largely interchangeable.

**Misshapen** The ascender bends in the wrong direction. The crossbar is wavy, with terminal bulbs at both ends.

**Correct** The ascender has a clean sweep to the left in an unbroken curve from the baseline. The crossbar is straight.

The eccentric letter ð lasted for a century. The ascender curve was taught until italic handwriting was introduced in Icelandic schools.

RASMUS Christian Rask, the great Danish philologist, is best known for much valuable work on the relationship of Indo-European languages. He was master of at least twenty-five languages and dialects, and contributed, among other things, to the decipherment of Persian cuneiform writing.

He wrote a grammar of the Sami language, *Ræsonneret lappisk sproglære* (Copenhagen, 1832) without having met anyone who knew it. He also discovered the connection between the languages of the Inuit in Greenland and the Unangan of the Aleut archipelago.

The Icelanders thank him for his support of the purist movement that saved the Icelandic language from extinction.

Mixed blessing

Rasmus Christian Rask encouraged lcelanders to revive the letter ð after centuries of disuse.

## abcdðefghij kimnopq2st nvxyzpæoöø ABCDESSH ZKLMEROP ZRSTUDXYZ ÞECEÖØ

## Unconventional

The last two pages of the Handwriting Models show a disappointing ronde. It may not have been familiar enough to Benedikt Gröndal. He wrote it with a pointed pen. A broad-edge pen would have been a more suitable tool.

In styles with rounded lower case bowls, the letters æ and œ (third line from the top, third and fourth letter from the right) often look too much alike. This example has a peculiar solution. The two are set apart by leaving out the exit stroke of one of them.

The letter ð, however, (top line, fifth from the left) is impeccable.

Copperplate is written with a pointed pen. A downstroke thickens when slight pressure separates the two halves of the split tip.

This unusual pen is designed to help the writer avoid a strained wrist.

## Proper

The family likeness to blackletter is obvious, especially in the capitals of this very proper Danish ronde. From *Rundskrifts-Bogen; til Skolebrug og Hjemmeøvelse*. Nyborg, no date, probably around 1880. abcdefgbiy hlmnopqts lnv xyzæö ABCDEFG BIJILDM NOPQRS TUVWXJ ZOLØ

## Fixed

A broad edge pen makes thicks and thins without added pressure. The angle of the nib to the stroke decides how thick it becomes. This tip is divided in three, but the splits serve mainly as ink channels.

## Excellence

This may well be the most handsome of all Icelandic copperplate models. It does depart from convention in the letters i, u and y. They begin with an arch, rather than with the usual entry curve, as in the letters j and p.

Jón Þórarinsson: *Skrifbók með forskriftum*, 1. hefti. Reykjavík, no date, probably around 1896.

## Discipline

Here's how children were taught how to hold a copperplate pen. Three fingers grip the shaft. All four knuckles point up. The hand glides on the nails of the third and fourth fingers.

The habit did not always take hold. Many eighteenth and nineteenth century portraits show people with quill pens. Most are held the modern way, with the hand resting on its side.

## Modern spirit

This model resembles the American Palmer method in many respects. It shows a rare understanding of movement in writing.

The ascender of letter ð has a proper curve but is written without a crossbar.

Steingrímur Arason: *Litla skrifbókin*. Reykjavík, 1922.

ab ddefgh mn

X 4

WHAT HAPPENED to copperplate? Times changed. Long entry strokes help to get the ink flowing from a dip pen. Bringing it to a halt and lifting it is actually harder than ending a stroke with an ornamental loop. Few modern fountain pens need one.

Copperplate has a narrow movement pattern. Pressure on an upstroke can stick a pointed nib into the paper and blot the page. Ballpoint pens can write in any direction.

Copperplate by professional clerks looked elegant. The style was less suited to ordinary people.

abcddðefghij klmnoppgrrs Ituvwxygaþæ ABCD,

## **Final flourish**

Guðmundur I. Guðjónsson's handwriting model offered variants, two versions of the letter ð among them. His letter O was still written in the Danish manner, Ø, which had been abandoned in Icelandic typewritten documents and printed matter decades earlier.

Lower case letters from *Skrifbók*, Reykjavík, no date, probably around 1953. Capitals from *Verkefni við skriftarkennslu*, Reykjavík, no date, probably around 1939.

## New beginning

Handwriting based on copperplate was largely abandoned in Icelandic schools in 1984. It was replaced by italic, a modern monoline version of renaissance handwriting that owes much to Ludovico Arrighi's approach.

A large selection of model sheets in this style is available for free download from the internet. This example shows a typeface, designed by Gunnlaugur SE Briem. It is provided free of charge to teachers who like to make their own. abcðdefghi jklmnopqrs tuvwxyzþæ ABCDÐEFG HIJKLMNO PQRSTUVW XYZÞÆ

## Venerable foundation

Arrighi's letters are based on a slightly slanting rectangle, 7–8°. The proportion of width to height is 3:4. The bowls of the lower case letters are based on triangles. From *La Operina*, Rome 1522.

## Benedikt Gröndal's handwriting advice

KEEP A comfortable grip on your pen; do not point it straight down, but slant it appropriately. Do not give the letters too much slope, as many models do. Make a habit of applying suitable pressure to make bold strokes. Do not use inferior or worn pens, nor too loaded with ink. Do not hurry, speed comes of its own accord. Remember to draw the entry strokes. Once you have mastered large letters, written slowly, make it your custom to write them smaller and faster. Read the words and the lines before copying them.

B.G.

Haldið á pennanum sem yður er hægast; stingið honum eigi beint niður, en hallið honum mátulega. Hallið eigi stöfunum of mikið, eins og er á mörgum forskriftum. Venjið yður á að styðja pennanum mátulega fast niður, til þess að gjöra feita drætti. Hafið eigi slæma eða slitna penna, og eigi of fulla af bleki. Flýtið yður eigi, skjótleikinn kemur af sjálfum sjer. Venjið yður vel á að draga fyrstu drættina. þegar þjer hafið tamið yður hina stóru og seinrituðu stafi, þá venjið yður á að rita stafina minni og fljótar. Lesið orðin og línurnar, áður enn þjer ritið eptir þeim.

## Handwriting models

An Icelandic manual, 1883

**B**<sup>ENEDIKT GRÖNDAL Sveinbjarnarson's handwriting booklet offers brief instruction in a new style that was introduced in Icelandic schools in 1875. Blackletter cursive had been replaced by the documentary hand of the British Empire.</sup>

Copperplate was written with a pointed nib and an awkward pen hold. It and the simplified versions that followed were taught to Icelandic children for over a century. Italic handwriting succeeded it in 1984.

HANDWRITING MODELS is a facsimile of the first Icelandic copperplate copybook.
