ÁGRIP

Í þessu tali er getið alls 1245 tegunda skordýra sem fundist hafa á Íslandi. Einnig er gerð grein fyrir öllum nafnabreytingum sem fram koma í rituðum heimildum frá síðustu aldamótum til útgáfudags þessa rits.

INNGANGUR

Ritaðar heimildir um íslensk skordýr er að finna allt aftur til 17. aldar og hefur skrá yfir þær til árslokka 1989 þegar verið birt (Erling Ólafsson 1990). Rannsóknir á íslenskum skordýrum hafa lengst af verið í höndum erlendra fræðimanna. Íslendingar fóru ekki að láta að sér kveða fyrr en á allra síðustu áratugum (Gísli Már Gíslason & Erling Ólafsson 1989).

Þáttaskil urðu í rannsóknnum á íslenskum skordýrum er Svíinn Carl H. Lindroth ferðaðist um landið sumurin 1926 og 1929. Í kjölfarið birtust margar ritgerðir um íslensk skordýr eftir ýmsa höfunda, en hæst ber doktorsritgerð Lindroths sjálfs þar sem getið er 700 skordýrategunda á Íslandi (Lindroth 1931).

Aftur urðu þáttaskil er ritröðin "The Zoology of Iceland" hóf göngu sína árið 1937, en driffjöður þeirrar útgáfu var Daninn Sören L. Tuxen og fylgdi hann því verki eftir allt til dánardægurs 1983. Í þessari ritröð er að finna ómetanlegar upplýsingar um dýralíf Íslands.

Árið 1945 birti Geir Gígja heildarskrá yfir íslensk skordýr (Geir Gígja 1945). Þar er getið alls 750 tegunda og hafði því tegundunum fjölgað um 50 á u.þ.b. 15 árum. Síðan hefur heildarskrá ekki verið gefin út. Fjölmargar nýjar tegundir hafa þó fundist og miklar breytingar orðið á flokkun og nafngiftum.

Í skránni hér á eftir er getið alls 1245 tegunda og er það mikil aukning frá samantekt Geirs Gígju (sjá viðauka bls. 58). Aukningin stafar af því að margar tegundir voru ófundnar árið 1945 og enn aðrar hafa numið land síðan.

Nýjar tegundir slæðinga berast stöðugt til landsins erlendis frá, oftast með varningi en stundum með vindum. Sumum tekst að festa sig í sessi en öðrum ekki. Þeirra síðarnefndu er þó einnig getið í skránni og eru þeir auðkenndir sérstaklega. Allmargir slæðingar til viðbótar eru til í söfnum en hafa ekki verið nafngreindir.

Það er ljóst að skrár sem þessi úreldast fljótt þar sem stöðugt finnast nýjar tegundir og nafngiftir breytast. Þess vegna þarf að endurskoða þær og endurútefna þegar tilefni gefst til. Sífellt er verið að gefa út tegundaskrár, gjarnan með mjög róttækum nafnabreytingum. Skordýrafræðingar sérhæfa sig í sífellt smærri tegundahópum en reyna í staðinn að fá yfirlit yfir stærri svæði á jörðinni. Stundum kemur í ljós að sömu tegund hefur verið lýst og gefið nafn oftast en einu sinni. Þá þarf að komast að því hvaða heiti er elst, en samkvæmt nafngiftareglum er elsta heitið rétt hærra en þau yngri. Oft verða menn að sætta sig við að nöfn sem orðin eru töm víki fyrir ókunnuglegum nöfnum. Í þessari skrá er töluvert um slíkar nafnabreytingar.

Mjög erfitt getur reynst að henda reiður á öllum nafnabreytingum. Hér á landi eru örfáir fræðimenn á þessu sviði og bóka- og tímaritakostur mjög takmarkaður. Það er því nokkuð tilviljunum háð hvaða upplýsingar eru tiltækar.

Það reyndist tímafrekt verk að taka þessa skrá saman. Kanna þurfti fjölmargar ritaðar heimildir, bera saman nafngiftir í þeim og meta hvað átt er við. Varðandi uppröðun og ýmislegt annað sem lýtur að kerfisfræði (*systematik*)

var stuðst við ýmsar heimildir, en einna mikilvægastar reyndust Bangsholt o.fl. (1979), Hackman (1980a, 1980b), Kloet & Hincks (1964-1978) og McAlpine o.fl. (1981).

Í skránni eru flestar tegundir sem getið hefur verið á prenti frá Íslandi. Nokkrum mjög ótrúverðugum tegundum er sleppt. Auk þess er getið margra tegunda sem höfundur og nánir samstarfsmenn hafa fundið en ekki komið á framfæri annars staðar.

Reynt var af fremsta megni að fá sérfræðinga í sem flestum tegundahópum til að lesa skrána yfir og gefa ábendingar. Það tókst vonum framar og án aðstoðar þeirra hefði skráin orðið mun ófullkomnari. Í sumum tilvikum þar sem ég hafði undir höndum nýjar heimildir með öllum nauðsynlegum upplýsingum var ekki leitað slíkra ábendinga. Í örfáum tilvikum tókst ekki að finna sérfræðinga til aðstoðar. Það er bagalegast varðandi naglýs (*Mallophaga*, *Phthiraptera*). Skráin yfir þær er því ófullkomin. Notendur skrárinnar eru beðnir að hafa þetta í huga. Vonandi tekst að bæta úr þessu áður en listinn verður gefinn út á ný.

SKÝRINGAR

Gera þarf grein fyrir uppbyggingu skrárinnar. Notast er við hefðbundið flokkunarkerfi sem að grunni til byggir á skiptingu skordýraflokksins (*Insecta*) í tvo undirflokka, vængleysingja (*Apterygota*) og vængbera (*Pterygota*). Þeim er síðan skipt í ættbálka, ættir, ættkvíslir og tegundir. Ýmsar aðrar flokkunareiningar eru þrúfaldlega notaðar, ekki síst undirættbálkur, yfirætt, undirætt og undirættkvísl, en í þessum efnum ríkja nokkuð mismunandi hefðir meðal sérfræðinga í ýmsum hópum skordýra.

Ættkvísla- og tegundaheitum fylgir ávallt nafn höfundar (eða höfunda) og árið sem ættkvíslunum/tegundunum var lýst. Ef tegundirnar hafa verið færðar úr upprunalegri ættkvísl eru höfundur og ártal innan sviga.

Margar tegundir hafa gengið undir ýmsum heitum og verið færðar milli ættkvísla. Gerð er grein fyrir öllum þeim heitum sem tegundirnar hafa gengið undir allt aftur til síðustu aldamóta. Ekki þykir ástæða til að rekja allar flækjur sem áttu sér stað fyrir þann tíma, en þá var algengt að tegundirnar væru rangt greindar. Þau heiti sem gefin eru upp, auk núgildandi ættkvísla- og tegundaheita, eru ýmist samnefni (*synonym*) eða önnur ógild heiti (ógild af ýmsum orsökum) eða heiti tilkomin vegna rangra greininga. Slíkum röngum heitum er raðað í stafrófsröð, inndregnum, undir viðkomandi ættkvísla- og tegundaheitum. Við samnefni er getið höfundar og ártals. Í öðrum tilvikum er (á eftir tvípunkti) vitnað til heimildar þar sem heitið er birt eða til viðeigandi heftis í "The Zoology of Iceland", þar sem allra eldri heita og heimilda er getið. Í sumum tilvikum kemur heiti fyrir í fleiri en einni heimild eftir að viðkomandi hefti "The Zoology of Iceland" var gefið út. Það er þá táknnað með *auctt.* (þ.e. ýmsir höfundar). Þetta er gert til að stytta upptalninguna í skránni og gera hana liprari.

Mismunandi leturgerðir eru notaðar til að auðkenna flokkunareiningar. Fiðrildistegundin *Chloroclysta citrata* hentar vel sem dæmi, en uppsetning hennar yrði sem hér segir (frekari útskýringar í hægri dálki):

LEPIDOPTERA
DITRYZIA
GEOMETROIDEA

14. GEOMETRIDAE

LARENTIINAE

CHLOROCLYSTA Hübner, 1825

CIDARIA: auctt.

DYSSTROMA Hübner, 1825

LARENTIA: Wolff, 1971

citrata (Linnaeus, 1761)

immanata (Haworth, 1809)

prunata: Wolff, 1971

ÆTTBÁLKUR
UNDIRÆTTBÁLKUR
YFIRÆTT

ÆTT (tölusett)

UNDIRÆTT

ÆTTKVÍSL

ÆTTKVÍSL (röng, ýmsar heimildir)

ÆTTKVÍSL (samnefni)

ÆTTKVÍSL (röng, sbr. "Z.o.I.")

tegund

tegund (samnefni)

tegund (röng greining, sbr. "Z.o.I.")

S. framan við ættkvíslarheiti táknar undirættkvísl, en s. fyrir framan tegundarheiti merkir undirtegund. Eftirfarandi tákn eru notuð framan við ættkvíslar- og tegundarheiti þar sem við á, en merking þeirra er sem hér segir:

+ tegundin lifir eingöngu innanhúss

* erlendur slæðingur, sem að öllu jöfnu lifir ekki í landinu

tegund útdauð á Íslandi

Ýmsar athugasemdir í skránni eru á ensku, þar sem reiknað er með að hún fái allnokkra dreifingu erlendis. Það ætti ekki að valda íslenskum notendum hennar vandkvæðum.

ÞAKKIR

Þessu verki hefði aldrei lokið án aðstoðar. Eftirtaldir sérfræðingar lögðu fram ómetanlega hjálp með gagnrýnum yfirllestri, hver á sínu sérsviði:

Andersson, H., Lundi, Svíþjóð (Diptera)
 Chandler, P., Maidenhead, Englandi (Diptera: Mycetophilidae)
 Dessart, P., Brussel, Belgíu (Hymenoptera: Ceraphronoidea)
 Danielsson, R., Lundi, Svíþjóð (Hemiptera: Aphidoidea, Coccoidea)
 Fergusson, N., London, Englandi (Hymenoptera: Cynipoidea)
 Fitton, M.G., London, Englandi (Hymenoptera: Ichneumonidae)
 Florén, F., Stokkhólmi, Svíþjóð (Diptera: Sphaeroceridae)
 Hansen, M., Kaupmannahöfn, Danmörku (Coleoptera)
 Hansson, Ch., Lundi, Svíþjóð (Hymenoptera: Chalcidoidea)
 Huddleston, T., London, Englandi (Hymenoptera: Braconidae)
 Huggert, L., Lundi, Svíþjóð (Hymenoptera: Proctotrupoidea)
 Högni Böðvarsson, Uppsölum, Svíþjóð (Apterygota)
 Karsholt, O., Kaupmannahöfn, Danmörku (Lepidoptera)
 Michelsen, V., Kaupmannahöfn, Danmörku (Diptera: Anthomyiidae)
 Midtgaard, F., Ási, Noregi (Hymenoptera: Symphyta)
 Pont, A., Reading, Englandi (Diptera: Fanniidae, Muscidae)
 Speight, M., Bray, Írlandi (Diptera: Syrphidae)
 Sæther, O., Björgvin, Noregi (Diptera: Chironomidae)
 Williams, B., Cambridge, Englandi (Siphonaptera)

Einnig ber að þakka K. Mikkola, Helsinki, Finnlandi, og M.F. Christensen, Álaborg, Danmörku, fyrir ábendingar. Bergþór Jóhannsson, Dóra Jakobsdóttir og Ævar Petersen lásu inngangskafila og lagfærðu. Kann ég þeim bestu þakkir fyrir.

SUMMARY

A checklist of Icelandic insects

by Erling Ólafsson
Icelandic Museum of Natural History
P.O.Box 5320
125 Reykjavik
Iceland

A checklist of Icelandic insects has not been published since 1945 when 750 species were listed (Geir Gígja 1945). The present list comprises 1245 species (see appendix p. 58).

Included are all species recorded in the literature (except for a few dubious ones), and a number of unpublished species mostly collected by the author during the past 20 years.

Most species groups in the list were checked by respective specialists (listed above), to whom I express my sincere gratitude. For some groups updated revisions or checklists were available. Unfortunately I was unable to find a person to assist with Mallophaga, which is thus presented in a provisional version. The taxonomy and nomenclature of that group will hopefully be corroborated before a revision of this checklist is published.

The checklist is presented in a traditional form, mostly following Kloet & Hincks (1964-1978). A few details call for explanations:

(1) Lists of synonyms, invalid names and previous generic combinations go back to the year 1900. The names are listed in alphabetical order, not chronological.

(2) References to the older literature follow invalid names (except the synonyms) and incorrect generic combinations. To make the list more convenient, I have chosen a single reference for each order. These references are the appropriate parts of "The Zoology of Iceland", where complete lists of previous generic combinations, synonyms and other invalid names are given. In some cases there are also more recent confusions.

(3) The following symbols are placed in front of species names where appropriate:

- + occurring indoor only
- * immigrant and adventitious species
- # species extinct in Iceland

If readers notice failures in this checklist, the author will be grateful for comments and criticisms.

Class INSECTA
Subclass I: APTERYGOTA
Order I: ARCHAEOGNATHA

ARCHAEOGNATHA

1. MACHILIDAE

- PETROBIUS Leach, 1817
MACHILIS: Bödvarsson, 1957
brevistylis Carpenter, 1913
maritima: Bödvarsson, 1957

Order II: THYSANURA

THYSANURA

1. LEPISMATIDAE

- LEPISMA Linnaeus, 1758
saccharina Linnaeus, 1758

Order III: PROTURA

PROTURA

EOSENTOMOIDEA

1. EOSENTOMIDAE
